

Gerry McShane, MICE

Gerry McShane is a director at Service Steel Warehouse in Houston Texas. He is currently Chair of the Education committee and ex chair of the sheet piling committee for PDCA.

Gerry graduated in the United Kingdom and joined a civil engineering consultant. He followed this with three years in South Africa with piling contractor Grinaker Construction to gain the required experience for the UK's P.E. exam.

Gerry is a highly experienced professional with a broad range of experience in ground engineering, with a career spanning several decades across multiple continents, including south Africa, the United Kingdom, Southeast Asia, and the United States.

Gerry has gained vast and crucial experience working with engineering firms, piling contractors, and steel manufacturers. With the manufacturers, Gerry was able to focus on cutting-edge research on steel metallurgy, noise, vibration, and corrosion resistance, which then expanded to driving innovations in construction methodologies, product development, and steel durability research.

In 2014, Gerry transitioned to Service Steel Warehouse to expand their business into the piling foundation market. With his vast experience in both technical and commercial roles, Gerry has been a driving force in advancing steel technology in the deep foundations industry.
