

## **Antonio Marinucci, Ph.D., P.E.**

Dr. Marinucci has 25+ years of progressive experience in civil & geo-structural design and construction on hyperscale mission critical data centers, infrastructure, capital development, and residential projects. He is the Global Technical Lead for GeoRisk, Constructability, and Sustainability at Google on their global data center projects. He is actively engaged in the site acquisition, due diligence, planning, design, and construction phases of a project, and is responsible for identifying and mitigating subsurface risks, and for delivering cost-effective, sustainable, and schedule-optimized practical solutions. In 2017, Dr. Marinucci founded V2C Strategists, LLC, a multifaceted advisory consultancy focused on geo-structural specialty construction and business management consultancy that delivers practical and implementable solutions. He is active in numerous national and international professional organizations and their technical committees, is a past chair of the ASCE Geoinstitute Deep Foundations Committee, and is an instructor and researcher for the Federal Highway Administration (FHWA) National Highway Institute. Dr. Marinucci is licensed in 14 U.S. states and Washington, D.C., and has co-authored more than 55 peer-reviewed technical publications.
