

## **Jeff Fippin, P.E., G.E., ENGEO**

Jeff has been practicing geotechnical engineering since 1997. Jeff completed his undergraduate studies in Civil and Environmental Engineering at the University of California, Davis and his master's degree in Geotechnical Engineering at the University of Texas, Austin. He is a licensed Professional Engineer in California, Washington, and Nevada and a licensed Geotechnical Engineer in California.

His experience includes waterfront and overwater structures, hydraulic structures, industrial facilities, transportation and infrastructure improvements, education and medical facilities, and residential and commercial developments. Jeff has significant experience in design and construction of deep foundations, tiebacks, micropiles, ground improvement, and earthwork. Jeff uses his significant experience in complicated design and construction to bring practical and constructable solutions to the most difficult problems. Jeff focuses on collecting the correct information to allow proper implementation of value engineering alternatives.
